

[Abstract]

[Objective] To provide an input element and a method for making an input with improved input stability and input accuracy

[Means for Solving Problem] An input element 26 of the present invention is used to make inputs to a computer 10 comprising a touch-pad 18 which is responsible to changes of static capacity. The input element 26 of the present invention comprises a conductive pad contact part 30 which contacts in face-to-face manner to the touch-pad. The pad contact part 30 is pivotally connected to a grip part 28 so that the contact face 30b always makes the contact face 30b contacted to a surface of the touch-pad 18. The present invention also provides an input method with the above input element 26.
